21839 7590 07/15/2008 BUCHANAN, INGERSOLL & ROONEY PC POST OFFICE BOX 1404 ALEXANDRIA, VA 22313-1404				
EXAMINER AKANBI, ISIAKA O				
ART UNIT 2886		PAPER NUMBER		
NOTIFICATION DATE 07/15/2008		DELIVERY MODE ELECTRONIC		

**Please find below and/or attached an Office communication concerning this application or proceeding.**

The time period for reply, if any, is set in the attached communication.

Notice of the Office communication was sent electronically on above-indicated "Notification Date" to the following e-mail address(es):

ADIPFDD@bipc.com

### Office Action Summary

**Application No.**

10/551,191

**Applicant(s)**

HILL ET AL.

**Examiner**

ISIAKA O. AKANBI

**Art Unit**

2886

**Period for Reply** -- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

**Status**

- 1) ☒ Responsive to communication(s) filed on 13 February 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

**Disposition of Claims**

- 4) ☒ Claim(s) 1-17 and 19-21 is/are pending in the application.
- 4a) Of the above claim(s) \_\_\_\_\_ is/are withdrawn from consideration.
- 5) ☐ Claim(s) \_\_\_\_\_ is/are allowed.
- 6) ☒ Claim(s) 1-17 and 19-21 is/are rejected.
- 7) ☐ Claim(s) \_\_\_\_\_ is/are objected to.
- 8) ☐ Claim(s) \_\_\_\_\_ are subject to restriction and/or election requirement.

**Application Papers**

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☒ The drawing(s) filed on 29 September 2005 is/are: a) ☒ accepted or b) ☐ objected to by the Examiner.
- Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
- Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

**Priority under 35 U.S.C. § 119**

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some \* c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
  2. ☐ Certified copies of the priority documents have been received in Application No. \_\_\_\_\_.
  3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

\* See the attached detailed Office action for a list of the certified copies not received.

**Attachment(s)**

- 1) ☒ Notice of References Cited (PTO-892)
- 2) ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 3) ☐ Information Disclosure Statement(s) (PTO/SB08)
- Paper No(s)/Mail Date \_\_\_\_\_
- 4) ☐ Interview Summary (PTO-413)
- Paper No(s)/Mail Date \_\_\_\_\_
- 5) ☐ Notice of Informal Patent Application
- 6) ☐ Other: \_\_\_\_\_

## **DETAILED ACTION**

### ***Amendment***

The amendment filed on 13 February 2008 has been entered into this application. Claim 18 is cancelled. Claims 19-21 have been added.

### ***Terminal Disclaimer***

The terminal disclaimer filed on 13 February 2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of pending Application Number 10/551,191 has been reviewed and is accepted. The terminal disclaimer has been recorded.

### ***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation

under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

**Claims 1-4, 9-21 are rejected under 35 U.S.C. 103(a) as being unpatentable over Guering et al. (5,694,479) in view of Gahagan et al. (2004/0174519 A1).**

Regarding to claims 1, 4, 9 and 19, Guering teaches a method of forming a shadowgraph image of a glazing comprising illuminating the glazing (Fig. 1: 3) with a light source (Fig. 1: 1) to form a shadowgraph image (Fig. 1: 5) of the glazing on a plane, focusing a camera CCD (**fig. 1: 6**) onto the image plane to measured/sample the illumination or light intensity by localized light source (**col. 1, lines 39-42**)(**col. 4, lines 2-3**), storing and analyzing the image using a computer that includes a memory (**see abstract**)(**col. 1, lines 44-45**)(**col. 3, lines 62-65**).

Guering is silent regarding to forming a shadowgraph image of the glazing on a virtual image plane and on other than a screen.

Gahagan from the same field of endeavor teaches of measuring a shadowgraph image of glazing/substrate formed on a virtual image plane (figs. 1 and 3)(pars. 0020, 0021)(page 5, right col., lines 20-21).

Therefore, it would have been at least obvious to one having ordinary skill in the art at the time of invention to modify Guering by measuring a shadowgraph image of

glazing/substrate on a virtual image plane instead of measuring on the screen for economic reason. Additionally, it would have been at least obvious to one having ordinary skill in the art at the time of invention to modify Guering by measuring a shadowgraph image of glazing/substrate on a virtual image plane instead of measuring on the screen for the purpose of detecting the differences in contrast.

Further, it would have been at least obvious to one having ordinary skill in the art at the time of the invention was made to form at any desired position (i.e. front/behind of the glazing/substrate) a shadowgraph image of the glazing on a virtual image plane for the purpose of providing a more accurate measurement.

As to claims 2-3, Guering when modified by Gahagan, Guering also discloses illuminating the glazing/substrate (**fig. 1: 3**) with a light beam/source (i.e. collimated light beam) from a localised light source to create a shadowgraph image on the virtual image plane and the virtual image plane is positioned behind the glazing so that the glazing is positioned between the light source and the virtual image plane (**fig. 1**)(**col. 2, line 23-35**).

As to claim 10, Guering discloses a method of determining the optical quality of a glazing (**figs. 1-3**), which include at least one area having a reduced light transmission comprising:

producing a shadowgraph image of the glazing (**Fig. 1: 3**); measuring (**fig. 1: 6**) the illumination of the glazing at a plurality of measurement points arranged in an array extending over the glazing; determining any deviation (**i.e. defects**) in illumination at those points from a desired value at each point (**col. 2, line 23-35**), wherein the at least

one area of reduced light transmission (**zone where the limit for optical value is different**) is omitted (**i.e. prohibited**)(**zone considered not to be measured**) from the array of measurement points (**col. 2, line 36-41**)(**col. 4, lines 28-36**).

As to claims 11, 12 and 13, Guering discloses a method to determine the optical quality of a glazing comprising:

illuminating the glazing (**fig. 1: 3**) with a localized light source (**fig. 1: 2**) to produce a shadowgraph image (**fig. 1: 5**), recording (**fig. 1: 4**) the shadowgraph image, determining (**fig. 1: 6**) valid measurement points of the shadowgraph image which excludes those points which correspond to obscured areas of the glazing, processing the recorded shadowgraph image to determine an illumination value for each valid measurement point (**col. 2, line 24-41**), constructing a reference image by scanning a convolution window point by point over the processed image and using a convolution filter to calculate a reference illumination value at points of the reference image which correspond to each point of the processed image by averaging the illumination values of the valid measurement points of the processed image covered by the convolution window and comparing the illumination value of each valid measurement point of the processed shadowgraph image with corresponding points of the reference image to determine the optical quality of the glazing (**fig. 1**)(**col. 2, line 54-64**)(**col. 3, line 13-col. 4, line 16**) and wherein the convolution window is of constant area during the scanning operation (**see abstract**)(**col. 4, line 50-52**).

As to claim 14, Guering also discloses the limitation wherein a valid measurement point is one in which the illumination value at that point is equal to or above a pre-set threshold (**i.e. weighted average**)(**col. 2, line 24-36**).

As to claims 15 and 16, Guering further discloses the limitation wherein when the point of the convolution window for which the reference illumination is being calculated corresponds with a non-valid measurement point of the processed image, a reference illumination is not calculated and wherein non-valid measurement points are not taken into account in the construction on the reference image (**col. 2, line 54-58**)(**col. 4, line 17-42**).

As to claim 17, Guering also discloses using the same light source (**fig. 1: 2**) for the production of the shadowgraph image (**fig. 1: 5**) and in relation to calculating the reference image (**fig. 1**).

**Claims 5-8, 20 and 21 are rejected under 35 U.S.C. 103 (a) as being unpatentable over Guering et al. (5,694,479) in view of Gahagan et al. (2004/0174519 A1), and further in view of Park (2002/0135831 A1)**

As to claims 5-8, 20 and 21, Guering when modified by Gahagan, Gahagan discloses light source that is collimated by a lens optical system (**figs. 1 and 3: 20, 36a and 36b**).

Guering when modified by Gahagan fail to specify that the light source is (i.e. LED/laser/ambient source) which is collimated by a mirror optical system and a wedge

prism that is used to tilt the virtual image plane positioned between the camera and the virtual image plane.

However, since Guering does not limit the light source to be used, it would have been at least obvious to one of ordinary skill in the art at the time of the invention was made to use any suitable light source (i.e. LED/laser source) for the purpose of evaluating the optical quality of a glass accurately. Additionally, it would have been at least obvious to one of ordinary skill in the art at the time of the invention was made to use any suitable light source (i.e. LED/laser/ambient source), since the method as disclosed by Guering works just as well with any light source.

Further, it would have been at least obvious to one of ordinary skill in the art at the time of the invention was made to use a mirror optical system and a wedge prism to tilt the virtual image plane, since as evidenced by Park, it is a conventionally known optical system layout of a laser collimator. **See (figs. 4A-B: 12, 14, 46, 48)(par. 0010).**

Therefore, it would have been at least obvious to one having ordinary skill in the art at the time of the invention was made to use a mirror optical system and a wedge prism to tilt the virtual image plane for the purpose of providing a more accurate measurement.

### **Additional Prior Art**

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The references listed in the attached form PTO-892 teach of other prior art a method of determining the optical quality of a glazing.

### ***Response to Arguments***

In response to Applicant's arguments/remarks, see pages 7-9 filed on 13 February 2008, with respect to the rejection(s) of claim 4 under 35 U.S.C. 112 has been fully considered and are persuasive. Therefore, the rejection of claim 4 has been withdrawn.

In response to Applicant's argument that there is no disclosure in Guering of forming a shadowgraph image of the glazing on a virtual image plane, or focusing a camera onto the virtual image plane, as recited in claim 1, it is respectfully pointed out to applicant that the examiner recognizes that obviousness can only be established by combining or modifying the teachings of the prior art to produce the claimed invention where there is some teaching, suggestion, or motivation to do so found either in the references themselves or in the knowledge generally available to one of ordinary skill in the art. See *In re Fine*, 837 F.2d 1071, 5 USPQ2d 1596 (Fed. Cir. 1988) and *In re Jones*, 958 F.2d 347, 21 USPQ2d 1941 (Fed. Cir. 1992).

Finally, Applicant's arguments with respect to claim 19 have been considered but are moot in view of the new ground(s) of rejection.

***Conclusion***

**THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Isiaka Akanbi whose telephone number is (571) 272-8658. The examiner can normally be reached on 8:00 a.m. - 4:30 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Tarifur R. Chowdhury can be reached on (571) 272-2287. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see <http://pair-direct.uspto.gov>. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
